TuffWrap Installations Protects Church Interior During Re-roofing

TUFFWRAP INSTALLATIONS TURNKEY SOLUTION

INDUSTRY Church & School

SOLUTION TuffWrap Suspended Cover

PROJECT SIZE 12,000 sq. ft. of Suspended Cover

When the going got Tuff...

...TuffWrap protected the newly renovated interior of a church in southeast Pennsylvania area during an extensive re-roofing project.

Years of fine carbon particles had built up on the existing roof. Left unprotected during removal and replacement, the extensive and expensive renovation work on the church's interior would be subjected to falling dust and debris that would have left it in ruins. Scheduled weddings, baptisms, and church masses needed to be protected.

That's why the roofing contractor called in **TuffWrap**. The consultant for the project recalls, "To say TuffWrap saved the church's interior from being destroyed is an understatement. So much fine dust, dirt, and carbon particles were falling through the joints of the roof deck during the tear-off it sounded like rain was falling onto the top surface of the plastic sheeting."

TuffWrap Suspended Cover was installed before work began on the old roof. The installation was so thorough and successful that photography for an upcoming wedding was taken while re-roofing was underway. The newly renovated interior of the church remained completely dust-free.

The roofing consultant continued, "The expertise and cooperation **TuffWrap** showed during the project made me a lifelong advocate of their work. Their product and service measures include workplace safety, international code compliance, and fire-retardant properties, all in accordance with the fire marshal's strict codes."

The roofing contractor has also specified TuffWrap ceiling protection for an upcoming June 2022 school reroofing project in suburban Philadelphia.

TuffWrap Installations Keeps Food & Beverage Facility Operational During Re-Roofing

TUFFWRAP INSTALLATIONS TURNKEY SOLUTION

INDUSTRY Food & Beverage

SOLUTION SmartSeam®

PROJECT SIZE 128,000 sq. ft. of Suspended Cover

When the going got Tuff...

...TuffWrap kept food production going. Our signature **SmartSeam® Suspended Cover** was used to keep a large Food & Beverage manufacturer operational during roof work.

When it came to install a new roof over their manufacturing facility, this **Food & Beverage Company** ran into a problem. The roof over the entire 128,000 square foot facility needed to be replaced, but they couldn't risk closing down while the work went on. An off-the-shelf plastic drape wasn't an option, because the equipment reached up to the ceiling.

SmartSeam® Suspended Cover was able to cover the production facility's equipment, and could be installed around all the protrusions. Because SmartSeam is the only code compliant suspended cover solution, it could be safely installed beneath the fire sprinklers.

The manufacturer was thrilled with the job TuffWrap did installing the suspended cover. During takedown, we also used **High Structured Dust Removal** to ensure that the facility was completely free of dust and debris after its roof was replaced.

TuffWrap Installations Keeps Mall Operational During Roofwork

TUFFWRAP INSTALLATIONS TURNKEY SOLUTION

INDUSTRY Retail

SOLUTION SmartSeam®

PROJECT SIZE 7,500 sq. ft. of Suspended Cover

When the going got Tuff...

...TuffWrap kept parts rolling off the line. **TuffWrap SmartSeam® Suspended Cover** was used to keep a vehicle manufacturer operating during a roofing project.

When a persistent leak called for roof repairs, this **Shopping Mall** was worried about having to close down one of its most heavily-trafficked corridors. Doing so would risk frustrating customers, and losing vendors and mall owners money in the process.

Fortunately, their roofer reached out to TuffWrap to provide a temporary protection system. We used our signature **SmartSeam® Suspended Cover** to protect the thoroughfare while roofwork went on above it. We were able to accommodate their regular schedule and construction timeline, and installed the suspended cover over the course of two overnight trips.

With the work underway, the facility asked if we could help take care of some of the dust that had been sitting on the roof deck for years. We used **High Structured Dust Removal** during takedown to leave the mall cleaner than it was before the project.

TuffWrap Installations keeps Production Line Operational During Expansion

TUFFWRAP INSTALLATIONS TURNKEY SOLUTION

INDUSTRY Food and Beverage

SOLUTION C.O.R.E. Frameless Walls®

PROJECT SIZE 400 In. ft. of C.O.R.E. Frameless Walls®

When the going got Tuff...

...TuffWrap kept a production facility up and running. **C.O.R.E. Frameless Walls®** was used to keep a dip and spread manufacturer open during the installation of a new production line.

When a **food and beverage client** needed to expand its production, it ran into a problem. New equipment was being installed in the same area as the existing line, and the work involved cutting concrete and operating heavy construction vehicles. If the existing line couldn't be protected, the facility would have to shut down for days, which would cause expensive delays.

Fortunately, the project manager reached out to TuffWrap for assistance. The solution to their problem was a series of **C.O.R.E. Frameless Walls®**. The walls were used to bisect the floor between the old and new lines, meaning production wouldn't have to slow down to accommodate the new equipment. The area around the new line would be covered by combining the Frameless Walls with our suspended cover in a **Total Enclosure**, trapping dust and debris in the area. Our signature **Pocket Doors®** ensured that crew and construction vehicles had easy access to and from the worksite.

When the job was done, the **food client** was thrilled with TuffWrap's solution to the problem. Without having to divert resources to coordinating construction and shutting down production, they were able to maintain their regular schedule without interruption.

TuffWrap Installations Keeps Showroom Open During Expansion

TUFFWRAP INSTALLATIONS TURNKEY SOLUTION

INDUSTRY Retail (Showroom)

SOLUTION Frameless Walls, Zipper Door

PROJECT SIZE 50 In. ft. of Walls, 1 Door

When the going got Tuff...

...TuffWrap kept a production facility up and running. **Frameless Walls** were used to keep a furniture retailer's showroom open during the expansion of the building.

When a **furniture retailer** decided to renovate its facility, it ran into a problem. The renovations, which were extensive, risked shutting down the showroom and interrupting business. They needed a way to perform renovations without throwing dust and debris into the showroom.

Fortunately, the project manager reached out to TuffWrap for assistance. The solution to their problem was one of Tuffwrap's signature **Frameless Walls**. The wall was used to separate the showroom from the renovations, meaning sales activity wouldn't have to slow down to accommodate the work. A **Zipper Doors** ensured that crew and employees had easy access to and from the showroom.

When the job was done, the **retail client** was thrilled with TuffWrap's solution to the problem. Without having to divert resources to coordinating renovations and shutting down the showroom, they were able to maintain their regular schedule without interruption.
